Professional Summary

Software Engineer with strong foundations in Data Structures and Algorithms, Object-Oriented Programming, and back-end development using Java and Spring Boot. Experienced in building scalable REST APIs, secure authentication systems, distributed microservices, and event-driven applications using Apache Kafka and RabbitMQ. Proficient in SQL, database design, Docker, Git, and cloud fundamentals with hands-on experience developing real-world backend projects. Passionate about solving complex problems and building reliable, high-performance software.

Technical Skills

- **Languages:** Java, Python, SQL, JavaScript
- **Backend Development:** Spring Boot, REST APIs, Node.js, Express.js, JWT Authentication, Microservices, Maven
- **Databases:** MySQL, MongoDB, Snowflake, PostgreSQL
- **Cloud & DevOps:** AWS (S3, EC2), Docker, Git, GitHub
- **Data Analytics:** Power BI, Tableau
- **Testing & Messaging:** Postman, RabbitMQ, Apache Kafka
- **Tools:** Postman, Streamlit, Jupyter Notebook, VS Code, IntelliJ IDEA, Linux
- **Relevant Coursework:** DSA, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks

Projects

KYC/AML Orchestration Platform

Backend Engineering Project

Java, Spring Boot, Node.js, Express.js, MongoDB, RabbitMQ, Docker, JWT, REST APIs

May 2026 – Jul 2026

- Developed a distributed microservices-based KYC/AML platform using Java Spring Boot and Node.js following object-oriented design principles.
- Built secure REST APIs with JWT authentication, centralized exception handling, audit logging, and asynchronous communication using RabbitMQ.
- Containerized services with Docker and designed modular, scalable backend components to improve maintainability and reliability.

ZestRoute – Delivery Analytics Platform

Data Engineering & Analytics Project

Java, SQL, AWS S3, Snowflake, Power BI

Jun 2026

- Designed an end-to-end data pipeline using AWS S3, Snowflake, SQL, and Java for scalable data ingestion and processing.
- Developed SQL transformations and Java utilities to validate, process, and optimize large datasets for analytics.
- Created Power BI dashboards to visualize operational metrics and support data-driven decision making.

Self-RAG – Self-Reflective Retrieval-Augmented Generation

AI / RAG Project

Python, LangChain, Pinecone, Gemini, GPT-4

Jun 2026

- Developed a self-reflective RAG system using LangChain and Pinecone to retrieve relevant information from uploaded documents.
- Integrated Gemini and GPT-4 models to generate context-aware responses grounded in retrieved evidence.
- Implemented self-evaluation and claim verification to detect unsupported information and improve response reliability.
- Built citation-based responses with confidence assessment and self-correction to reduce hallucinations.

Education

MVJ College of Engineering

Bengaluru, Karnataka

Bachelor of Engineering – Computer Science & Engineering (Data Science)

Sep 2023 – Present

CGPA: 8.26/10

Achievements

- **Cognizant Technoverse Hackathon:** Built **ClearCare AI**, a healthtech platform integrating AI-powered insurance advisory, clinical pre-authorization automation, and multilingual patient education.
- **WeMakeDevs × OpenMetadata Hackathon:** Proposed and prototyped advanced metadata management solutions, including schema impact analysis and semantic duplicate detection.
